Ask about your report...

You are at a crossroads, Tiffany, where your strong analytical-creative blend as a final-year design student is ready to be translated into a confident, evidenced move. The central tension lies in packaging your existing evidence into a role-specific portfolio and CV, and converting your capability into composure, in order to commit to the product design or UX research track. This shift from uncertainty to direction is crucial, and the evidence points to a market-ready career index of 76, with a moderate confidence level.

Market-ready · Career Index 76/100 · held at moderate confidence.

Your career index stands at 76, indicating you are market-ready, with a moderate confidence level. This is reflected in your Holland code, which is R-I-A, led by Realistic at 83. Your strongest clusters are Direction & Identity at 79, and Execution & Momentum at 77, while your binding constraint is Confidence & Decision at 64. This suggests that your capability base is running ahead of your confidence and decision-making abilities.

The data also shows that you have a high level of Openness at 95, and high levels of Conscientiousness at 92, and Extraversion at 65. This indicates that you are highly open to new experiences, conscientious in your approach, and extraverted in your interactions. Your abilities in Verbal at 82, Numerical at 74, and Logical at 91, also suggest that you have a strong foundation in analytical and creative skills.

As you consider your next steps, it is essential to focus on packaging your existing evidence into a tight, role-specific portfolio and CV, and running mock interviews to convert your capability into composure. Applying in a focused batch of 8-12 well-matched roles, rather than a broad spray, will also increase your chances of success. With a 76% modelled success rate, and a 3-5 month horizon to a credible offer, committing to the final-year design student track is a recommended route.

However, it is also important to consider alternative routes, such as deepening into a technical or specialist lane, or testing an adjacent pivot. These options have lower modelled success rates, but may still be viable depending on your interests and goals. Ultimately, the decision will depend on your confidence and decision-making abilities, which are currently the binding constraint.

“Your capability base runs ahead of your confidence and decision-making, creating a packaging-and-conviction gap rather than a skill gap.”

— COUNSELLOR, ON TIFFANY

Who You Are

The stable temperament beneath the day-to-day — how you characteristically work, decide and relate.

You have a distinct personality profile, with high levels of Openness, Conscientiousness, and Agreeableness. Your Openness score of 95 suggests that you are highly curious and open to new experiences, much like a master chef who is always experimenting with new ingredients and recipes. Your Conscientiousness score of 92 indicates that you are reliable and diligent, similar to a skilled engineer who carefully plans and executes each project. Your Agreeableness score of 79 shows that you are cooperative and compassionate, like a seasoned diplomat who navigates complex social situations with ease. These traits will serve you well in your career, as you will be able to adapt to new situations, work effectively with others, and build strong relationships.

— Peaks — personality traits (height = strength)

● Constellation — cluster scores

Low Openness

High Openness

Your high Openness points to curiosity, comfort with ambiguity and an appetite for novel problems — like a mind that prefers open water to a marked channel. It is an asset in fast-moving, design- or strategy-led roles, with the caveat that routine execution may need deliberate structure to anchor it.

Low Conscientiousness

High Conscientiousness

Your high Conscientiousness is a powerful career multiplier: reliable follow-through, organisation and self-discipline that compound like interest over time and signal strongly to employers — provided it doesn't tip into perfectionism.

Low Extraversion

High Extraversion

Your high Extraversion supports visibility, networking and roles with a strong interpersonal or persuasive component — energy that, channelled deliberately like a current through a turbine, accelerates the flow of opportunity toward you.

Low Agreeableness

High Agreeableness

Your high Agreeableness reads as collaboration, trust-building and low-friction teamwork — valuable in cross-functional and client-facing settings, with assertiveness and boundary-setting as your deliberate growth edge.

Low Neuroticism

High Neuroticism

Your low Neuroticism reads as steadiness under pressure — composure that is an asset in high-stakes, ambiguous or fast-moving decision roles.

EXHIBIT · The peaks are the levers — the high poles are where Tiffany works best with the grain; the low poles are where deliberate structure pays for itself.

Interests & Strengths

Your interests resolve to a R-I-A (Holland) code — the compass needle — set against the role shapes, job families and aptitudes that play to it.

**Realistic 83****Investigative 80****Artistic 80**

Your interests are reflected in your Holland code, R-I-A, which indicates a strong inclination towards Realistic, Investigative, and Artistic pursuits. This combination suggests that you enjoy hands-on, practical work, as well as exploring and understanding complex systems and ideas. You may find yourself drawn to careers that involve designing, building, or problem-solving, such as product design or UX research. Your high score in Realistic interests, 83, is particularly notable, as it indicates a strong affinity for working with physical objects and systems, much like a skilled craftsman who takes pride in their work.

EXHIBIT · Holland code R-I-A: Realistic leads at 83, Investigative close behind at 80 — best-fit work sits where rigour meets a visible payoff.

Your top work roles are Nature / Agriculture, Physical Science, and Engineering, which reflect your strong Realistic and Investigative interests. These roles often involve working with physical systems, designing and building new products or solutions, and exploring complex scientific concepts. You may find that roles such as product designer, UX researcher, or technical writer are a good fit for your skills and interests, as they allow you to combine your creative and analytical abilities to design and develop innovative solutions.

EXHIBIT • Nature / Agriculture is the highest-fit archetype at the 83th percentile — the natural shape for a near-term move.

Your top job groups are Engineering & Technical, Information Technology, and Skilled Trades, which align with your Realistic and Investigative interests. These fields value problem-solving, critical thinking, and hands-on skills, which are all areas where you excel. You may find that roles such as product design, UX research, or technical writing are a good fit for your skills and

interests, as they allow you to combine your creative and analytical abilities to design and develop innovative solutions.

EXHIBIT · Engineering & Technical is the closest family at 80% overlap — the most efficient place to concentrate the early search.

Your abilities are well-rounded, with high scores in verbal, logical, and spatial reasoning. Your verbal score of 82 suggests that you are effective at communicating complex ideas and negotiating with others, like a skilled debater who can articulate their points with clarity and conviction. Your logical score of 91 indicates that you are highly analytical and able to think critically, similar to a seasoned detective who can piece together seemingly unrelated clues. Your spatial score of 68 is still respectable, indicating that you have a good sense of visual-spatial relationships, like a skilled architect who can design functional and aesthetically pleasing buildings.

Career Index & Clusters

A single read of employability momentum, decomposed into where the strength and the constraint actually live.

A strong analytical–creative blend — a builder who wants the work to mean something

Your cluster scores reveal a nuanced picture of your strengths and areas for development. Your Direction & Identity score of 79 suggests that you have a clear sense of purpose and direction, like a skilled navigator who can chart their course through uncertain waters. Your Execution & Momentum score of 77 indicates that you are able to take action and make progress towards your goals, similar to a seasoned athlete who can maintain their momentum and push through challenges. However, your Confidence & Decision score of 64 suggests that you may struggle with self-doubt and indecision, like a ship without anchor, drifting in uncertain waters. This is an area where you may need to focus on building your confidence and decision-making skills, perhaps by seeking feedback from trusted mentors or peers.

Direction & Identity

79 /100

Direction and identity is a clear strength for you (79/100). Career clarity anchors the cluster at 84, while values alignment (73) is the softer thread to firm up. When clarity outruns confidence, the work is consolidation — like wearing in a new pair of boots by repeatedly naming the chosen direction until it feels owned, not borrowed.

Career clarity

84

Interest–role fit

80

Values alignment

73

Market Readiness

73 /100

Your market readiness sits at 73/100 — a clear strength. Skill coverage (77) is the asset to lead with; skill-gap severity (68) is the gap most worth closing before a serious search. Readiness at this level converts to interviews; your limiting factor is usually packaging the evidence — polishing the shop window — not building more of it.

Execution & Momentum

77 /100

Your execution and momentum reads as a clear strength (77/100). Execution momentum is running hot at 82, with follow-through (72) the lagging half — the gap between starting and finishing. Your job here is to protect the cadence and convert motion into a small number of completed, showable artefacts — momentum you can point to, not just feel.

Confidence & Decision

64 /100

Confidence and decision is a working strength (64/100) — and for you it is the most important number in this report to read carefully. Impostor load (62) sits below the capability the rest of your profile demonstrates, which is the classic signature of a confidence gap rather than a competence gap — the bridge is built, you simply haven't trusted your weight to it yet. Your lever is evidence and exposure — structured wins and reps — not more preparation in the abstract.

Network & Environment

67 /100

Your network and environment is a working strength (67/100). Networking momentum (70) is the steadier side, while workload sustainability (64) is the watch-item — the soil the rest of your profile is trying to grow in, which can quietly erode the gains. A small, deliberate increase in warm connections plus sustainable working conditions is the highest-leverage, lowest-cost move available to you.

Career index
cx.career_index

● Moderate

Life-performance
cx.bloom_index

● Tentative

Wellbeing & Reserves

Career gains rarely hold when reserves are depleted — the sustainability behind the numbers.

While your wellbeing index is not yet scored, it is essential to prioritize your sustainability and reserves to maintain your momentum and achieve your goals. Think of your wellbeing as a battery that needs to be regularly charged to function optimally. By taking care of your physical, emotional, and mental health, you can ensure that you have the energy and resilience to navigate the challenges and opportunities that lie ahead. This may involve setting aside time for self-care, seeking support from trusted friends or mentors, and being mindful of your workload and stress levels.

Where the Market Meets You

How the profile would land in the market today — readiness, demand, and a credible time-to-offer.

Your career index of 76 indicates you are market-ready, with a moderate confidence level. The job market data suggests that roles in Engineering & Technical, Information Technology, and Skilled Trades are similar to your profile, with high levels of similarity.

The top roles in these groups, such as Software Engineer, Product Manager, and Technician, are likely to be a good fit. However, it's essential to consider your interests and strengths when exploring these options.

The Holland code R-I-A, led by Realistic, suggests that you have a strong analytical-creative blend. This is reflected in your high scores in Openness, Conscientiousness, and Extraversion, which are valuable assets in the job market.

Your Possible Futures

Thicker branch = higher probability

THE ROUTES, AS SCENARIOS

LEAD DIRECTION + MARKET R...

76

Commit to the Final-year design student — choosing between product design and UX research track

This is the route your data most clearly supports: a focused move into final-year design student — choosing between product design and ux research, building directly on the direction clarity and market-readiness already on your record.

🕒 3–5 months to a credible offer

INVESTIGATIVE STRENGTH

72

Deepen into a technical / specialist lane

Your profile carries real analytical weight (Investigative 80), which opens a specialist path — going deeper on craft until you become the person a team relies on for the hard problems, the way a sharpened tool earns its place on the bench.

🕒 4–7 months, with stronger compounding after

EXPLORATION HEDGE

69

Test an adjacent pivot

If your primary direction proves narrower than hoped, an adjacent pivot keeps your options alive without restarting.

🕒 5–9 months, contingent on early signals

ENTERPRISING + NETWORK

67

Move toward ownership & leadership

With Enterprising at 70 and a workable network base, you have the raw orientation for a path that trades pure individual contribution for scope, people and outcomes — stepping back from the instrument to conduct the orchestra.

🕒 6–12 months to a step-up role

EACH ROUTE, IN DETAIL

SUCCESS ODDS

01 Commit to the Final-year design student — choosing between product design and UX research track

DIRECTION + MARKET READINESS

Committing to the Final-year design student track has a 76% modelled success rate, with a 3–5 month horizon to a credible offer. This route leverages your existing strengths and interests, but requires you to package your evidence and build conviction to convert capability into composure.

REQUIRED MOVES

- Package your existing evidence into one tight, role-specific portfolio and CV
- Run two to three mock interviews to convert capability into composure
- Apply in a focused batch of 8–12 well-matched roles rather than a broad spray

HORIZON

3–5 months to a credible offer

● Moderate

02 Deepen into a technical / specialist lane

INVESTIGATIVE STRENGTH

Deepening into a technical or specialist lane has a 72% modelled success rate, with a 4-7 month horizon. This route allows you to build visible depth and expertise, but requires a stronger compounding effect over time and a willingness to take on more risk.

REQUIRED MOVES

- Choose one signature capability and build a visible depth project around it
- Publish or present the work so your expertise is externally legible
- Target roles that name the specialism explicitly in the job spec

HORIZON

4-7 months, with stronger compounding after

● Moderate

03 Test an adjacent pivot

EXPLORATION HEDGE

Testing an adjacent pivot has a 69% modelled success rate, with a 5-9 month horizon. This route provides an exploration hedge, but requires you to validate fit against your secondary interest axis and keep your primary route warm, making it a more uncertain and potentially longer-term option.

REQUIRED MOVES

- Run two low-cost experiments (a project, a conversation, a short brief) before committing
- Validate fit against your secondary interest axis before reorienting the search
- Keep your primary route warm so the pivot is a choice, not a fallback

HORIZON

5-9 months, contingent on early signals

● Moderate

04 Move toward ownership & leadership

ENTERPRISING + NETWORK

Moving toward ownership and leadership has a 67% modelled success rate, with a 6-12 month horizon. This route requires you to take visible ownership, build senior relationships, and reframe your narrative around impact and judgement, making it a more challenging and longer-term option.

REQUIRED MOVES

- Take visible ownership of one cross-functional outcome, end to end
- Build five to eight genuine senior relationships in your target field
- Reframe your narrative around impact and judgement, not tasks

HORIZON

6–12 months to a step-up role

● Moderate

Probabilities are modelled estimates on a 30–92% band, not guarantees. See the methodology footer for the exact weighting.

“A strong analytical-creative blend is a valuable asset in the job market, but it's crucial to consider your interests and strengths when exploring different roles and options.”

People & Environment

The forces around Tiffany — who and what supports the move, what strains it, and where the open doors are.

● Support ● Opportunity ● Strain

Closer = stronger influence

Closer forces pull harder. The map reads Tiffany's network and environment cluster as a set of surrounding influences — support to lean on, strain to manage, and opportunity to convert.

● Networking momentum	70
● Workload sustainability	64
● Counsellor	78

EXHIBIT · The standing relationships are real leverage — protect the supports, name the strain early, and treat the open doors as the cheapest distance between Tiffany and the next offer.

The Plan

A prioritised, time-boxed plan — convert capability into visible evidence, build confidence through reps, protect the reserves.

Package your existing evidence into one tight, role-specific portfolio and CV to increase your visibility and credibility in the job market.

Run two to three mock interviews to convert capability into composure and build confidence in your abilities.

Apply in a focused batch of 8–12 well-matched roles rather than a broad spray, to increase your chances of success and reduce the risk of rejection.

Choose one signature capability and build a visible depth project around it to demonstrate your expertise and commitment to potential employers.

First 30 days

P1 Package your evidence

Consolidate your existing wins into one role-specific CV and a tight portfolio aimed squarely at commit to the final-year design student — choosing between product design and ux research track. The evidence already exists; your task is making it legible at a glance — polishing the shop window, not restocking the shelves.

P2 Sharpen your targeting

Define your 8–12 best-matched target roles and tailor outreach to each rather than applying broadly.

Days 31–60

P2 Address your confidence & decision

Confidence & Decision is your binding constraint at 64/100. Pick one concrete, time-boxed action against it this month — small and finished beats large and pending.

P2 Open warm connections

Reach out to five to eight people in your target field with a specific, low-ask message. Warm introductions are the single highest-leverage move available to you in the search.

Days 61–90

P2 Run your focused application batch

Apply to your targeted set in a concentrated push, track every response, and review the funnel weekly. Treat each interview as a rep that compounds, not a pass/fail.

P3 Review and recalibrate

Review your progress against this plan, retire what is done, and recalibrate targets with fresh interview signal in hand.

The Counsellor's Reflection

Counsellor's integrated read — where the numbers, the sessions and the judgement meet.

Taken together, Tiffany's profile reads as a capability base that is ahead of the felt sense of it. The most useful thing I can say is that the work from here is consolidation and exposure, not more assessment: the evidence is on record, and what remains is conviction, packaging, and protected reserves.

My recommendation is to commit to commit to the final-year design student — choosing between product design and ux research track as the primary bet while keeping one adjacent option warm, and to treat the 90-day plan as a sequence of reps rather than a checklist — each completed interview and each warm connection compounds.

Setmycareer Career Intelligence · Tiffany Woodward · issued June 19, 2026 · Counsellor. Methodology: 31 pc.* signals → 5 confidence-weighted clusters → composite Career Index; route probabilities blend index, cluster, interest fit and stretch, discounted by confidence. Scores are point-in-time and rendered, never re-scored. A structured aid for discussion, not a diagnosis or a guarantee of outcome.
